

Go-Forward Project Guide

PROJECT GOAL:

Apply the solution-thinking method learnt in the program, to think through any challenge you want to work on. Present this detailed thinking through with a proposed solution approach.

1: Identify a common problem or challenge area where you would like to work towards building a solution.

Take up a challenge that you are familiar with or that you are concerned about.

- Consider any challenges your institution is facing [For example, if in your college, student participation in voluntary activities is low. How can you increase the participation and involvement of more students?]
- Consider day to day challenges you see around you or that you are facing in your own day to day home or college life
- Consider some of the challenges you see around you in your locality or city
- Consider some of the critical challenges that the state of Gujarat is facing, that you would want to work towards

2: Apply Solution Thinking in this area, to think it through

STEP 1:

Identify your end-goal: Where do you want to go?

The end goal I want to achieve –

STEP 2:

What are alternative approaches to get to the end-goal?

Alternative 1:

Alternative 2:

Alternative 3:

STEP 3:

Considering all the approaches - design a solution, also keeping in mind the constraints of the situation to ensure the solution will work

Proposed solution approach –

3: Make a presentation to consolidate and present your thinking through & solution approach.

If you choose, you could present/ share your presentation with the class or in any class forum (e.g. Whatsapp group).
